

Technical Case Study

This case study consists of **two parts**:

- **Part A:** Creative
- **Part B:** Technical

You have **1 week** to complete both parts. They carry **equal weight**.

Purpose

The case study simulates real-world scenarios we face daily, including:

- Ambiguous problem statements
- No predefined recipe or model answer
- Need for creative thinking and structured problem-solving

We aim to assess:

- Your ability to break down complex problems
- Craft innovative solutions
- Demonstrate adaptability and originality

There is **no perfect solution**. Use any resources (research, AI tools, Copilot, peers), but ensure the final work is **your own**. Reference all sources.

Presentation Expectations

- **Playback Interview:** 1 hour with the same panel
 - **Part A:** 15-minute presentation + 15-minute Q&A
 - **Part B:** 15-minute presentation + 15-minute Q&A
 - We will review your **code for Part B** beforehand and may ask detailed questions.
-

PART A: Creative Case Study

Task:

Craft an **innovation for the Banking or Finance industry** by borrowing principles from:

- Another industry (**Cross-Industry Innovation**) **OR**
- Nature (**Biomimicry**)

Create a pitch deck and come and present your idea on the day of your interview

Your presentation should cover:

- The source of inspiration
- How you applied it to Banking/Finance
- The problem it solves or how it transforms the business model
- The value proposition

You may use an **innovation framework** (optional), but clearly articulate the **value** of your idea.

We recommended that your deck be no more than **five slides**.

You **do not** need to submit your deck beforehand. You can present it on the day and send it / upload it afterwards.

Here are some innovation frameworks & banking examples to give you some ideas:

Biomimicry:

Example: Portfolio Diversification: The concept of a diversified investment portfolio, where various assets balance risk, is compared to the behaviour of a flock of birds. In a flock, birds maintain a certain distance and adjust their direction in response to the group, a form of decentralised decision-making that minimises risk for the individual while preserving the flock's overall direction. This natural model helps investors understand how to balance loosely correlated assets to achieve portfolio stability.

Another industry:

1. Cross-Industry Innovation

- *Example:* Applying **hospitality principles** (personalised concierge services) to banking → VIP customer experience with proactive financial advice.

2. Analogous Inspiration

- *Example:* Studying **theme park queue management** → Implementing virtual queuing for branch visits to reduce wait times.

3. Lateral Thinking

- *Example:* Using **gaming reward systems** → Gamified savings accounts that reward milestones with perks.

4. **Business Model Innovation via Analogy**

- *Example:* Adopting **subscription models** from streaming services → Fixed monthly fee for unlimited transactions and premium features.

5. **Translational Innovation**

- *Example:* Borrowing **telemedicine principles** → Virtual financial consultations with AI-driven diagnostics for credit health.
-

PART B: Technical Case Study

Overview:

Showcase your programming and analytical skills.

- Submit your code via **GitHub** (access to specified reviewers)
- Present results and a **code walkthrough** (15 min)
- Followed by **Q&A** (15 min)

Please refer to the detailed Markdown (md) files and the supplied README documents for the technical requirements (within the subfolders). Note that Part B consists of three problems/options; **you only need to choose one**. Choose the one that excites you the most.

We have also provided some starter code and synthetic data. The synthetic data is a backup in case you cannot source better actual data. However, using the synthetic data is not mandatory.

NB:

- Please submit your GitHub link or send your code (for Part B) along with any relevant data at least 24 hours before your scheduled interview.
- Note that you do not need to submit your results presentation beforehand; you will present to us your findings and results on the day of the interview, as outlined in the introduction of this document.
